**LENS Program tracks volunteer and employee's driving records**

by Bradley M. Pinsky, JD/MHA/EMT-D

The LENS program is the License Event Notification Service. The program reports events that impact a drivers license, such as a suspension, revocation, conviction, reported accident, and license expiration. The program is free to all fire districts and fire companies and municipal and not for profit ambulance services. The program can even be tailored to provide reports on information the district desires to receive.

Interested participants should obtain the following forms:

MV-15L (application)

MV-15MOU (Memorandum of Understanding for participation)

MV-15GOV (Public Organization Request for Exempt Search Account).

Participation in the LENS program can assist your agency at evaluating whether a member or employee should be permitted to operate a vehicle. It is strongly suggested that the agency create a policy that provides how to respond to an infraction, suspension, accident, or other event uncovered by the LENS program.

More information about the program and the above forms are available at:
